we are learning to note and develop our
initial ideas, enhancing clarity for the
reader.

Willie Beach.

Patient: William Beach.

Date of Birth: 4th March 1942.

Age: eight.

Blood type: 0

Allergies: William Beach does not have allergies,
peanuts and pollen. As well as that William
has been diagnosed with asthma recently. As a
result of that he breaths very heavily and
can not do much exercise. (He ~~is~~ does not
carry an inhaler.)

Nationality: Welsh.

Medical History.

William Beach was born a couple of weeks
early. Before of this he spent his first
four weeks in the world in Hospital.
He needed a personal doctor beside him as
he had a small lung curving. When he
was discharged from Great Ormond Street
Hospital he had a good weight and was
fed well. This changed quickly, his mother
started smoking and William was taking
in the smoke. He was struggling to breath.
A week later, half of what he breathed
in was smoke. He was only given food
and water at dinner. At the age of
three he had serious tonsillitis.
At the age of four he had
