

Dear Earth:

Seen as no volcanoes have erupted recently, I was concerned that you had forgotten how to make them explode. I have written below some instructions to help you if you need it.

- ① You need to move the tectonic plates so the magma can escape through the gap.
- ② When the magma which has escaped settles on the earth it cools + turns to rock.
- ③ Magma forms when mantle gets hot and then it rises.

We're hearing about volcanoes
