

Tuesday 15th October 2010

L.O. We are learning to use ~~and~~ subheadings and subheadings to organise our writing.

## ~~Volcanoes~~ Volcanoes

There are three types of volcanoes dormant volcanoes extinct volcanoes and active volcanoes. ~~that~~ There are under water volcanoes which shoot fire/w lava.

## Lava

Just inside the volcano the lava is magma on the outside it is lava. Lava is ~~1000~~ 9 times hotter than boiling water.

## Inslos koks

\* Inslos koks are formed by cooling of lava. This is basalt of a inslos kok. There is also obsidian.

How volcanoes are formed  
So there are two tectonic plates then they push together and create a volcano.

## Eruptions

Eruptions are very dangerous because lava is 1000 degrees hot. ~~but~~ people have to ~~run~~ ~~away~~ ~~from~~ their homes and when I saw a volcano it was at its hot ball
