We are learning to create cohesion.

Science: Theory of evolution - Charles Darwin and Mary Anning

Throughout history, people have wondered how we began. Nearly every religion has its own version of how we began. However, some who don't believe in a religion believe the people that you are about to be told about. These people are Charles Darwin ~~and~~ and Mary Anning. One of these people created the theory that mankind evolved from apes and the other showed that dinosaurs existed and we have evidence of it. Both of these people helped scientists understand how we started out and about the life that lived before man. In this text, I will share with you facts about these two people and what they discovered. Let's begin.

Charles Darwin was the world's greatest naturalist and the man who first came up with the idea of evolution.

23.1.20
He first discovered several new species of animals on a voyage with Robert Fitzroy. These included the Galapagos tortoise and finches. During the voyage, he collected seeds from plants he found. One of these plants (Rhubarb) grew very well in England. He then went on to invent the idea of evolution and how we evolved. His theory was popular.
